Contents

Volume 220 (1989)

Genetic Mechanisms in Tumour Initiation and Progression, No. 11

Proto-oncogene activation during chemically induced hepatocarcinogenesis in rodents (MTR 07262)
D. G. Beer and H. C. Pitot (U.S.A.) 1

Reviews

Specific-locus mutations induced in eukaryotes (especially mammalian cells) by radiation and chemicals: a perspective (MTR 07263)
D.M. DeMarini, H.E. Brockman, F.J. De Serres, H.H. Evans, L.F. Stankowski Jr. and A.W. Hsie (U.S.A.) 11

Polychlorinated biphenyls (PCBs): mutagenicity and carcinogenicity (MTR 07264)
S. Safe (U.S.A.) 31

Special Issue

Use of Shuttle Vectors for the Analysis of DNA Damage Processing in Mammalian Cells

edited by A. Sarasin

Preface (MTR 02601)
A. Sarasin 49

Introduction

Molecular mechanisms of mutagenesis in mammalian cells: present and future (MTR 02602)
A. Sarasin (France) 51

Research Papers

SV40-based shuttle vectors

The development of transient SV40 based shuttle vectors for mutagenesis studies: Problems and solutions (MTR 02603)
M. Seidman (U.S.A.) 55

Use of *supF*, An *Escherichia coli* tyrosine suppressor tRNA gene, as a mutagenic target in shuttle-vector plasmids (MTR 02604)
K.H. Kraemer and M.M. Seidman (U.S.A.) 61

Studies on direct and indirect effects of DNA damage on mutagenesis in monkey cells using an SV40-based shuttle vector (MTR 02605)
K. Dixon, E. Roilides, J. Hauser and A.S. Levine (U.S.A.) 73

Comparing the frequency and spectra of mutations induced when an SV-40 based shuttle vector containing covalently bound residues of structurally-related carcinogens replicates in human cells (MTR 02606)
V.M. Maher, J.-L. Yang, M.C.-M. Mah and J.J. McCormick (U.S.A.) 83

Construction of a shuttle vector containing a single O^6-methylguanine: A probe for mutagenesis in mammalian cells (MTR 02607)
K.S. Ellison, E. Dogliotti and J.M. Essigmann (U.S.A., Italy) 93

SV40-based shuttle viruses (MTR 02608)
C.F.M. Menck, C. Madzak, G. Renault, A. Margot and A. Sarasin (Brazil, France) 101

Simian virus 40

From simian virus 40 to transient shuttle vectors in mutagenesis studies (MTR 02609)
F. Bourre, G. Renault and A. Gentil (France) 107

Modified SV40 for analysis of mismatch repair in simian and human cells (MTR 02610)
T.C. Brown, I. Zbinden, P.A. Cerutti and J. Jiricny (Switzerland) 115

0165-1110/89/$03.50 © 1989 Elsevier Science Publishers B.V. (Biomedical Division)

EBV-based shuttle vectors

Improved EBV shuttle vectors (MTR 02611)
S.B. Haase, S.S. Heinzel, P.J. Krysan and M.P. Calos (U.S.A.) 125

Mutational specificities of 1′-acetoxysafrole, *N*-benzoyloxy-*N*-methyl-4-aminoazobenzene, and ethyl methanesulfonate in human cells (MTR 02612)
C.A. Ingle and N.R. Drinkwater (U.S.A.) 133

Retroviral shuttle vectors

Retroviral shuttle vectors as a tool for the study of mutational specificity (base substitution/deletion/mutational hotspot) (MTR 02613)
C.R. Ashman (U.S.A.) 143

Vectors for the analysis of deficient-repair syndromes

Host cell reactivation of CAT-expression vectors as a method to assay for cloned DNA-repair genes (MTR 02614)
E.E. Henderson, K. Valerie, A.P. Green and J.K. De Riel (U.S.A.) 151

Repair of DNA damage in shuttle vectors, virus, and chromosomal DNAs may depend on their biological imprinting — a 'Pygmalion' effect (MTR 02615)
J.E. Cleaver, L. Vuksanovic, A.N. Player and L.H. Lutze (U.S.A.) 161

Comparative study of Epstein–Barr virus and SV40-based shuttle–expression vectors in human repair-deficient cells (MTR 02616)
M.R. James, A. Stary, L. Daya-Grosjean, C. Drougard and A. Sarasin (France) 169

The use of integrating DNA vectors to analyse the molecular defects in ionising radiation-sensitive mutants of mammalian cells including ataxia telangiectasia (MTR 02617)
J. Thacker (Great Britain) 187

Vectors for recombination / integration

Effect of DNA damage on stable transformation of mammalian cells with integrative and episomal plasmids (MTR 02618)
J.-M.H. Vos and P.C. Hanawalt (U.S.A.) 205

Analysis of recombination in mammalian cells using SV40 and SV40-derived vectors (MTR 02619)
S. Subramani (U.S.A.) 221

Integrated targets in genomic DNA

Perspectives on the use of an endogenous gene target in studies of mutational specificity (MTR 02620)
E.A. Drobetsky, A.J. Grosovsky and B.W. Glickman (Canada) 235

Molecular analysis of spontaneous mutations at the *gpt* locus in Chinese hamster ovary (AS52) cells (MTR 02621)
K.R. Tindall and L.F. Stankowski Jr. (U.S.A.) 241

Mutagenic treatments result in inactivation of expression of a transfected bacterial gene integrated into a human cell line (MTR 02622)
A.R. Lehmann, C.F. Arlett, S.A. Harcourt, H. Steingrimsdottir and M.M. Gebara (Great Britain) 255

Lambda phage shuttle vectors for analysis of mutations in mammalian cells in culture and in transgenic mice (MTR 02623)
W.C. Summers, P.M. Glazer and D. Malkevich (U.S.A.) 263

Conclusion

Use of data from bacteria to interpret data on DNA damage processing in mammalian cells (MTR 02624)
F. Hutchinson (U.S.A.) 269
